

# Impulse3<sup>™</sup> Programming Adapters

#### **Features**

- Adapters compatible with Cypress Impulse3 device programmer
- Adapters available to support programming all Cypress PROMS, EPROMS, PLDs, CPLDs, and USB microcontrollers

#### **Functional Description**

*Impulse3*™ is Cypress's OEM version of the Data I/O Chip-Lab™. It provides programming support for all of Cypress's programmable devices. Device-specific adapters and drivers

ensure that you get the specific device support you need for your programming application. The *Impulse3* base unit supports DIP devices up to 44 pins. For other device/package combinations, an adapter is required. DIP adapters can be used directly with the *Impulse3* base unit, while PPI adapters require an additional module, CY3501A.

### Impulse3 Device Programmer Availability

The CY3500 *Impulse3* Device Programmer has been discontinued as of Q4 1998. Cypress will continue to support existing customers by providing updated *Impulse3* software and selling device-specific adapters as well as the CY3501A.
